

Project Responsibility Report

Project: Dungeon Crawler OOP Game

Team Members:

1. Areg Muradyan
2. Edmon Tsatinyan
3. Vahe Asatryan

The project responsibilities were divided into three main parts: core logic, CLI/map integration, and GUI development.

Areg Muradyan was responsible for the core game logic, excluding map-related work. This included the main game flow, player movement logic, inventory system, item usage, crafting logic, game completion checks, and connecting the core classes together.

Edmon Tsatinyan was responsible for the CLI integration and map-related parts of the project. This included creating and organizing the game maps, setting up the map manager, implementing command-line rendering, handling CLI input commands, and testing the game through the terminal.

Vahe Asatryan was responsible for the graphical user interface. This included creating the Swing/JFrame UI, displaying the game map visually, adding keyboard controls, showing inventory/resources, and connecting the UI to the existing game logic.

All team members contributed to testing, debugging, and final integration. The final project can be run in GUI mode by default or in CLI mode using the `-cli` argument.

No major unresolved issues remain.
